

Madrid in Detail

I.

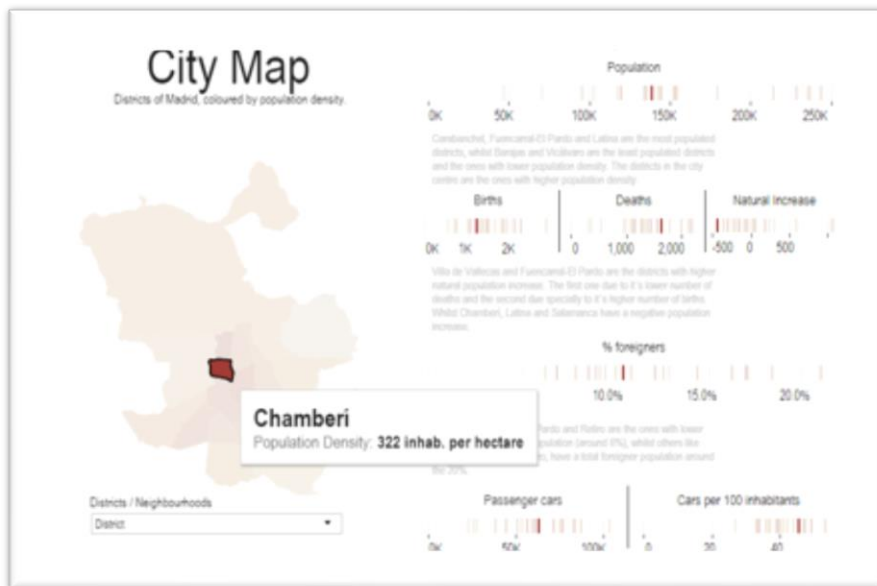

The percentage of people voted for left wing parties has negative correlation with second housing price. While People voted for right wing parties has positive correlation with second housing price. Looking at the relation between 2015 house price and votes to the 4 main parties in 2015 elections to City Hall, the graphs show the correlation clearly.

II.

The city has more cars per 100 inhabitants has higher priced houses. I refer to the chart of Relation between house price in 2015 and passenger cars per 100 inhabitants. The bar graph indicating the number of cars per 100 shows decreasing pattern. Line graph indicating house price also showing gradually dwindling pattern. Since both graphs is showing same decreasing pattern, we can assume that number of cars and house prices have positive correlation for most of cities

III.

The district with highest population density is Chamberi as 322 inhabitants per hectare. The district shows negative natural increase as -500. Clicking the district on city map it shows Births as around 1200 and Deaths around 1700 and Natural increase as -500.
